BMKG issued Tsunami Early Warning System (+5')

Background

Chronology of TSUNAMI KRAKATAU DECEMBER 22, 2018

22 Dec (Local Time)

- 

07:00 AM BMKG issues early warning of high sea waves
- 

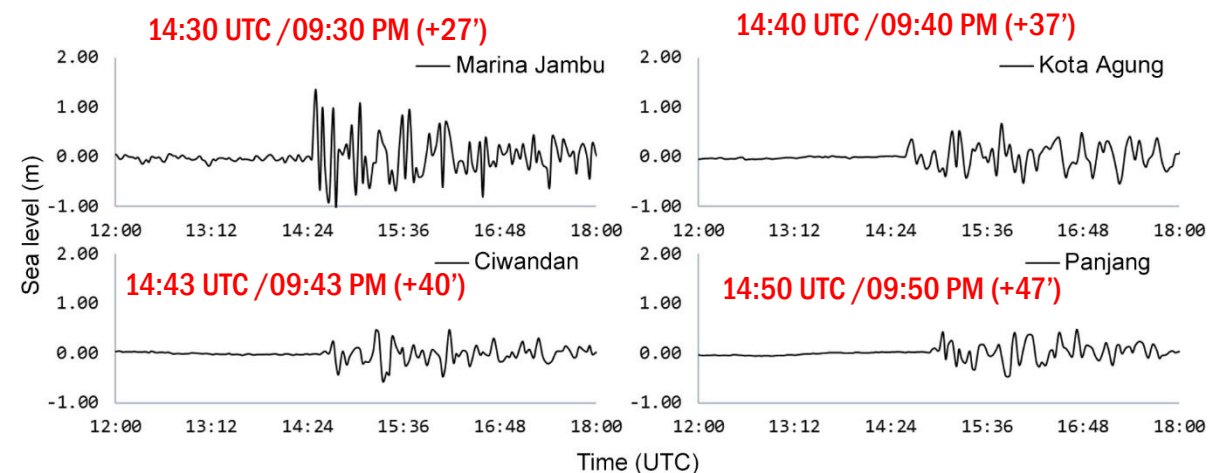

08:56 PM PVMBG announced Mount Anak Krakatau Eruption
- 

09:30 PM BMKG received reports of abnormal high tides
- 

09:30 – 10:00 PM BMKG checked Tide Gauge data
- 

10:30 PM BMKG issued a press release for an atypical Sunda Strait tsunami

Tsunami Record

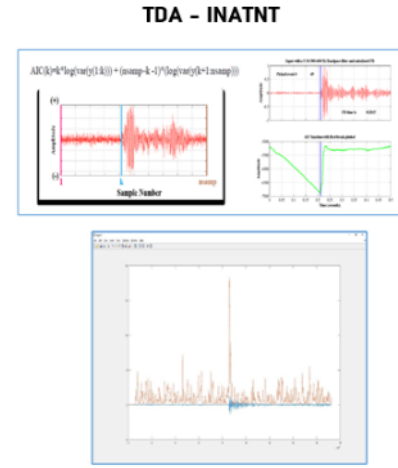

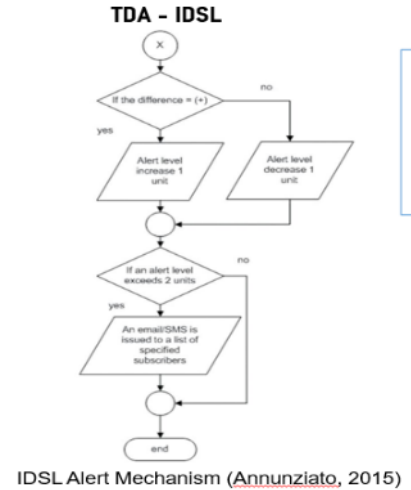

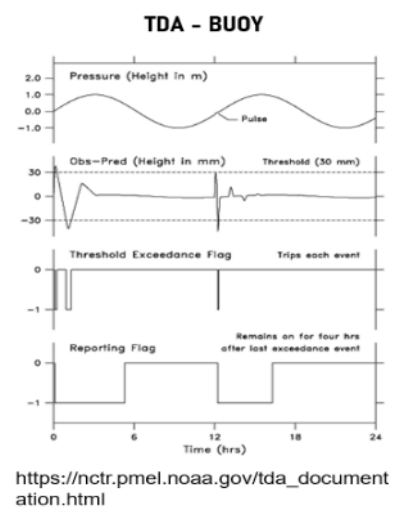

InaTNT Development

InaTNT is an integrated system that **detects sea level change anomalies that indicate a tsunami wave which recorded by sea level observation data**. Several sea level observation networks from internal (BMKG, BIG, BRIN (formerly BPPT), KKP) and external resources have been integrated into InaTNT system. The presence of InaTNT will improve the performance of the InaTEWS System in detecting tsunamis caused by tectonic and non-tectonic sources.

OBJECTIVES OF INATNT DEVELOPMENT

SEA LEVEL ANOMALY DETECTION ALGORITHM APPLIED IN INATNT

- 1 • **Integrate sea level observation data** from internal and external resources/stakeholders internal into a single integrated system and display
- 2 • **To provide sea level anomaly automatic detection facility** through mareogram data as heads up for the operator
- 3 • **To provide supporting system and SOP** for Non Tectonic Tsunami Warning System.
